

INTEGRATED, RECONFIGURABLE, PLUG-AND-PLAY, HMI SOLUTION

Mi-HMI™

Mi-HMI is a fully reconfigurable Human-Machine Interface solution, consisting of a display platform to allow interfacing to any signals/devices, and a graphics rendering engine.

Fully Reconfigurable Smart Display

- Advanced graphics rendering engine
- Reads a variety of data sources and renders graphics to the display
- Renders high quality, user-defined vector graphics
- Can act as a single function or multifunction display
- Many display sizes available
- Sunlight readable
- Easily configurable for portrait or landscape orientation
- Optional touch screen
- Optional Extended Color Gamut (ECG)
- Suitable for many industries, including Medical, Transportation, Industrial

About General Digital

General Digital has over 40 years of experience in developing specialized display systems and software for aviation, commercial, transportation, medical and military use. Our Software Services division offers development, verification/validation and testing of safety-critical software. This combined experience led to our expertise in flat panel display technology and HMI interfaces. Therefore, it was a natural progression for General Digital to enter the field of HMI systems. Our time-tested disciplines make us qualified to provide the full spectrum of service—from design software to display hardware.
